Project	Eastern River Basin District			
Report	Draft - Cammock - River and Lake Programme of Measures - for download			
Date	December 2008			
Project No: 39325		Document Reference: 39325/ERBD40/DG134 - S		
Version	Author	Reviewed	Checked	Date
Draft 1	AOC/AC	AGH	AOC	DEC 2008

Water Framework Directive

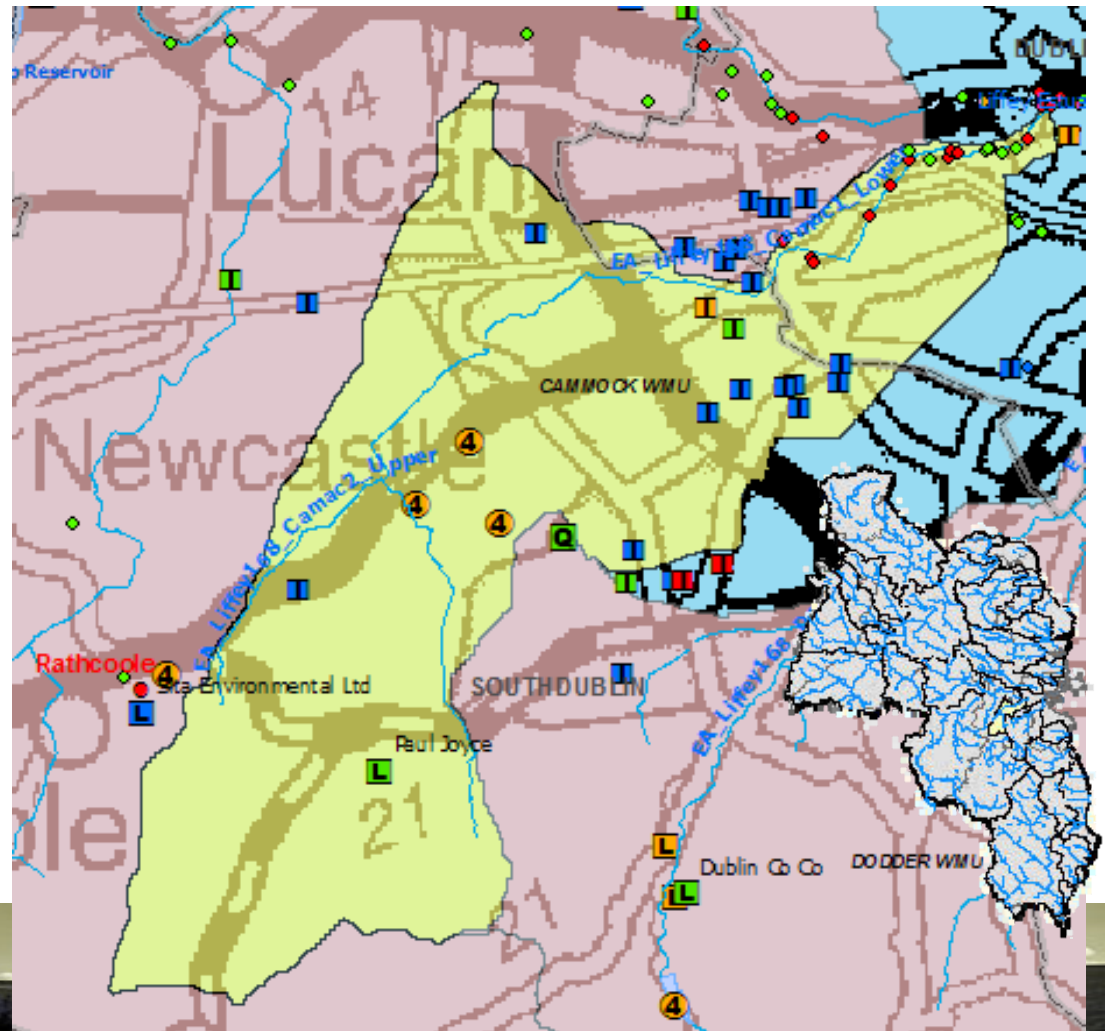

- ❑ The Draft River Basin Management Plan was published on the 22nd December 2008 for Public Consultation.
- ❑ This Programme of Measures accompanies the River Basin Management Plan created for the Eastern River Basin District.
- ❑ The River Basin Management Plan can be downloaded from the website, whilst more detail of the Programme of Measures is contained in the River Basin Management System which can be accessed through your Local Authority.
- ❑ The River Basin Management System is a web-based tool that assists Local Authorities to store information about the condition of their waters and the Programme of Measures for their improvement.
- ❑ For more information please visit www.erbd.ie

Overview of Water Management Unit

Geography

- ❑ Local Authorities: 87% South Dublin, 13% Dublin City
- ❑ River Length: 21 km
- ❑ HMWB: River Camac, Leixlip Reservoir, Grand Canal Main Line E of Lowton
- ❑ Land use: Predominantly land-use is urban
 - Urban populations cover 57% of the area for example at Lucan and Newcastle.
 - 24% pasture use
 - 12% arable

Risk Assessment Legend

See www.erbd.ie for more information on Article 5 Risk Assessment

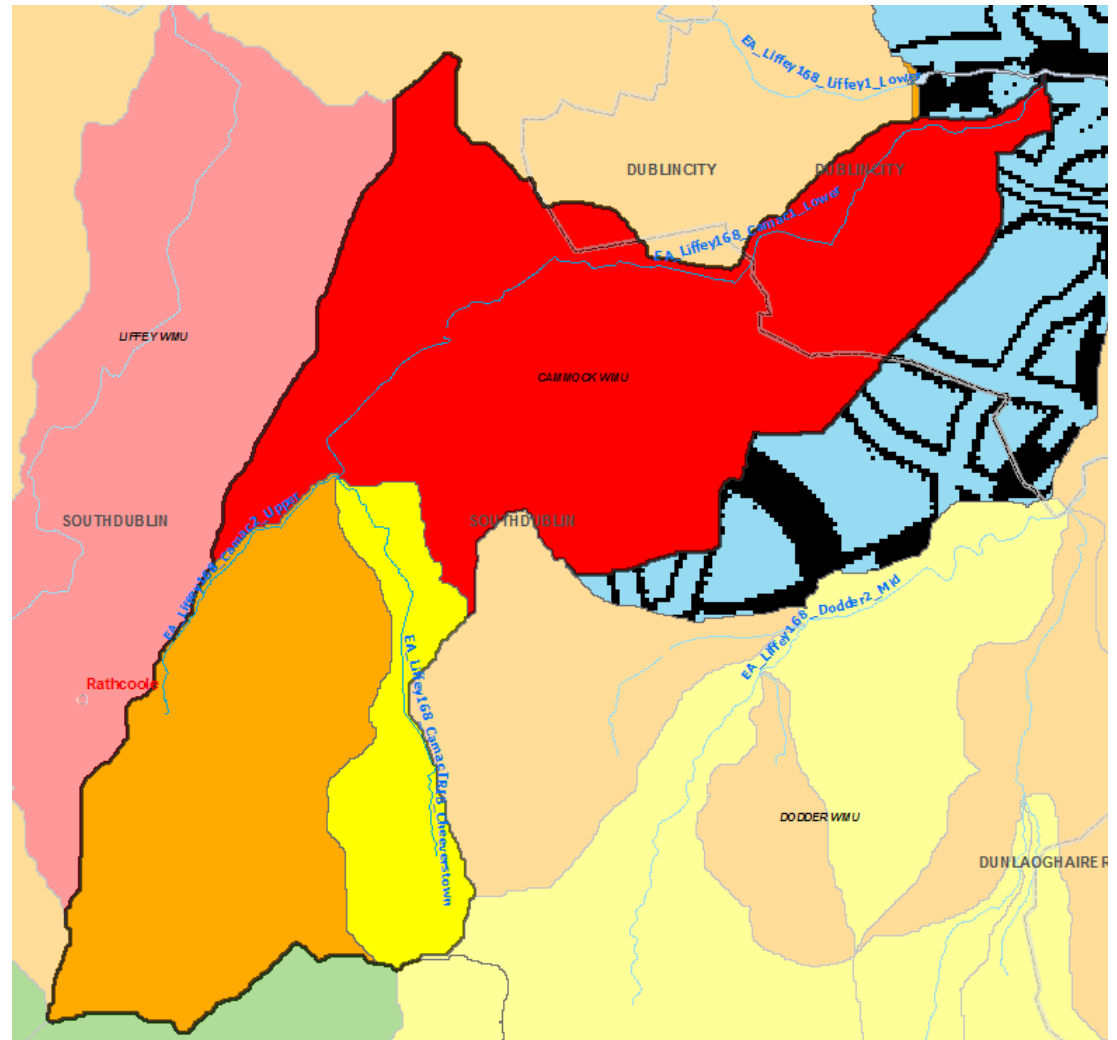

Risk	Symbol with Level of Risk	Risk	Symbol with Level of Risk
Abstraction			
CSO	 1a  1b  2a  2b	WWTPs	 1a  1b  2a  2b
Hydrometric Station	 ACTIVE  INACTIVE  OBSOLETE	WTPs	 2a
IPC Facilities	 1a  1b  2a  2b	Landfills	 1b  2a  2b
IPC Rivers	 1a  1b  2a  2b	Mines	 1a  1b  2a
Section 4	 1a  1b  2a  2b	Quarries	 2a
Based on Article 5 Risk Assessment: 1a : At risk, 1b : Probably at risk, 2a : Probably not at risk, 2b : Not at risk			

Status of Water

The existing condition of our waters was determined by the Environmental Protection Agency using water quality, ecology and morphology monitoring data.

River Status:

Moderate	33%
Poor	33%
Bad	33%

The percentage status is determined by the number of reportable segments or sub basins. For this reason the percentage might not seem representative.

Objectives

- ❑ Waters must be of satisfactory quality and sufficient quantity to protect the aquatic environment and its beneficial uses.
- ❑ We have four core objectives:
 1. Prevent deterioration and in particular maintain High or Good Status
 2. Improve waters to achieve Good Status where appropriate
 3. Progressively reduce chemical pollution
 4. Achieve our protected area objectives

Protected Areas

- Some areas require greater protection because they contain rare and vulnerable habitats or wildlife. Other protected areas are sensitive because of their beneficial use for humans, such as drinking water sources or shellfish areas.

National Heritage Areas (4)	✓	Grand Canal, Lugmore Glen, Slade Of Saggart And Crooksling Glen
-----------------------------	---	---

Protected Areas Legend

Type of Protected area	Symbol
Drinking water – Monitoring point	
Drinking Water – Rivers	
Drinking Water - Groundwater	
Drinking Water – Surface water	
Nutrient Sensitive rivers	
Nutrient Sensitive Areas	
National Heritage Areas	

Type of Protected area	Symbol
Special Protected Areas	
Special Areas of Conservation	
Beaches	
Recreational lakes	
Salmonid Waters	
Register protected Areas – Water Dependant Habitats	
Shellfish	

What are the problems to address?

In the Eastern River Basin District an online management system allows local authorities to store, assess and make Programmes of Measures on all the information emerging relating to the Water Framework Directive.

The first step is to identify any issues that might prevent us from reaching the ultimate target of 'Good Status' (please see plan for a full definition of 'Good Status').

In the Cammock sub-catchment the problems are:

- Low Ecological Rating
- Inferior Habitat
- Fish Migration Impedances

What could be causing these problems?

Pressure	County	% contribution
Agriculture	South Dublin	20
Usage and Discharge of Dangerous Substances	South Dublin	5
Forestry	South Dublin	10
Wastewater and Industrial Discharges	South Dublin	55
	Dublin City	100
Wastewater from Unsewered Properties	South Dublin	10
Morphology	South Dublin	At Risk
	Dublin City	At Risk

- ❑ The Cammock flows from a rural part of South Dublin to Dublin city centre discharging into the Liffey estuary.
- ❑ In South Dublin a number of factors have been identified including agriculture, wastewater and industrial discharges and forestry.
- ❑ In Dublin City all pressures have been identified as emerging from wastewater and industrial discharges. In particular houses where the foul sewer is misconnected to a pipe discharging to rivers instead of to a sewer cause significant problems in all urban areas.

All percentages are estimated based on available data, analysis and expert judgement.

Programme of Measures

- Having assessed the current condition of our waters, the extent of areas to protect, and the risks and pressures affecting our waters, we can now determine the measures needed to bring them all back to good status.
- We must aim to achieve full implementation of all basic measures before 2015. If the implementation of all Basic Measures before 2015 will not get us to Good Status then we must select necessary Supplementary Measures.

<i>Basic Measures</i>	Measures required by law
<i>Supplementary Measures</i>	Non-statutory measures deemed necessary

- The following pages detail the proposed Programme of Measures. We have also proposed an Alternative Programme of Measures that, in light of the large number of measures to be taken, prioritises certain measures for the first cycle of the plan (2010 – 2015).
- ***Please see the Appendix for the full list of basic and supplementary measures selected in both the Proposed and Alternative Programme of Measures.***

Proposed Programme of Measures

This proposed Programme of Measures aims to achieve the 4 core objectives as described earlier by fully implementing all basic measures and also implementing supplementary measures where deemed necessary.

Basic Measures:

A full list of basic measures is listed in the Draft River Basin Management Plan. It includes the regulations enacted from the following 11 European Directives and also requires member states to create measures for 11 other issues:

11 European Directives

1. Bathing Water Directive
2. Habitats Directive
3. Birds Directive
4. Drinking Water Directive
5. Major Accidents (Seveso) Directive
6. Environmental Impact Assessment Directive
7. Sewage Sludge Directive
8. Urban Waste Water Treatment Directive
9. Plant Protection Products Directive
10. Nitrates Directive
11. Integrated Pollution Prevention Control Directive

11 Other Basic Measures

1. Cost recovery for water use
2. Measures to promote efficient and sustainable use
3. Protection of drinking water sources
4. Control of abstraction and impoundment
5. Authorisation of discharges to groundwater
6. Control of point source discharges
7. Control of diffuse source pollution
8. Control of priority substances
9. Control of physical modifications of surface waters
10. Controls on other activities impacting water status
11. Prevention or reduction of the impact of accidental pollution incidents

Proposed Programme of Measures - Rivers

- **Supplementary Measures (In descending order of cost):**

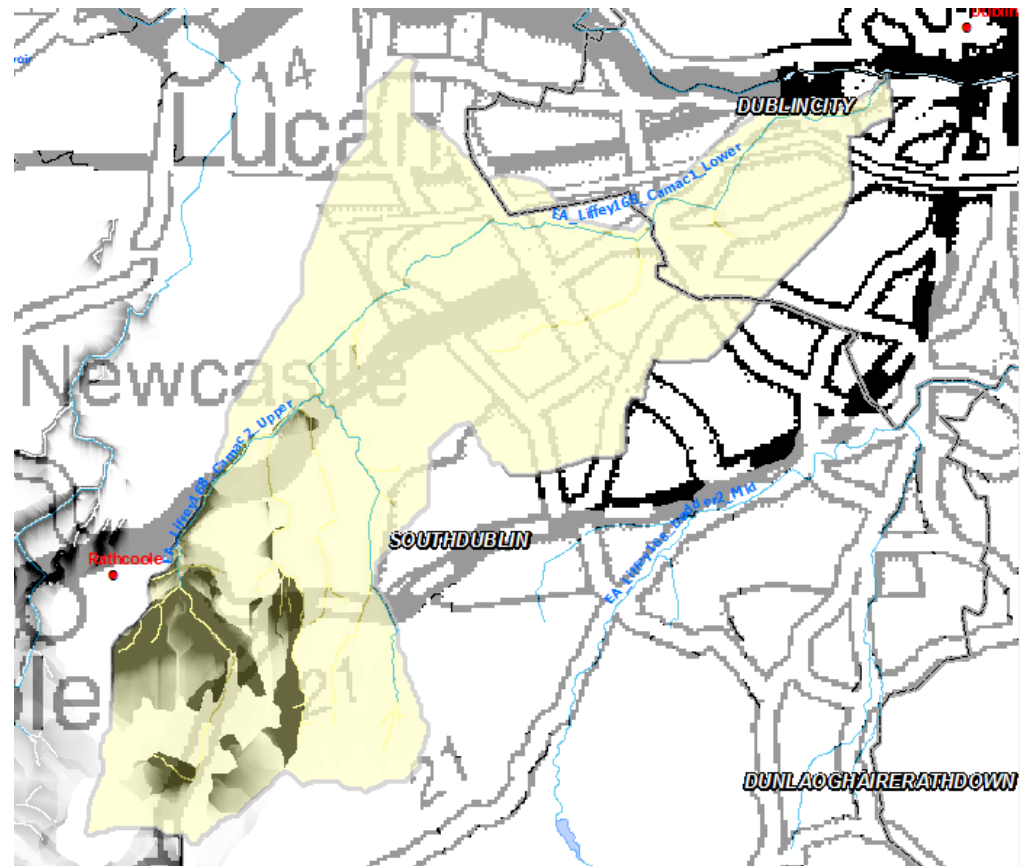

Top Ten Supplementary Measures - River Sub-catchment
Diffuse Runoff (Urban) - Storm Sewers Separation (Screening & Treatment)
CSO - Upgrades and Rehabilitation
Enforce Regulations on Septic Systems
Improve Removal of certain parameters at WWTP
Implement Community Digestors for Alternative Energy
Restrict Cattle Access to rivers - Create Cattle Drinking points
Diffuse Runoff (Urban) - Implement SUDS
Diffuse Runoff (Urban) - Gullies Management
Diffuse Runoff (Urban) - Street Cleaning Programme
PCS - Principles for Good Plant Protection Practise

Alternative Programme of Measures – Basic Measures

We have prepared an Alternative Programme of Measures for comparison. This Programme of Measures selects the measures to prioritise for implementation during the first 6 year plan that are thought to be most effective, but still aims to achieve Good Status as early as possible

By prioritising the measures to be implemented in the first cycle, the Alternative Scenario aims to save time and money by focussing on the most effective measures first.

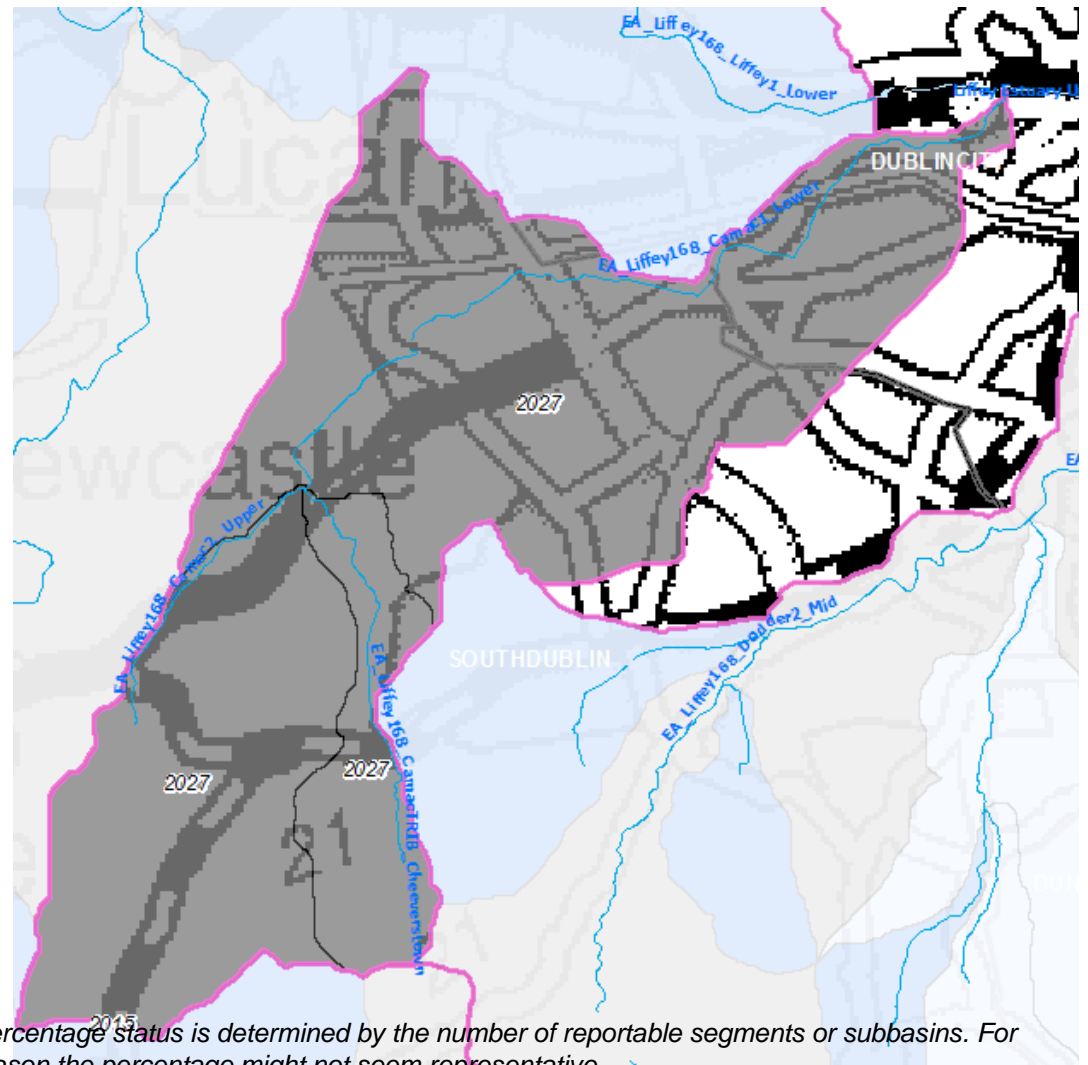

Phosphorus modelling by the ERBD project shows that of the entire catchment only 11% of the South Dublin Land area is of high risk of causing direct runoff into the river.

Alternative Objectives – Extended Timescale

- ❑ In some cases due to technical infeasibility, disproportionate cost or the natural condition of the waterbody it may not be possible to achieve all core objectives by 2015.
- ❑ The main pressure preventing achievement of Good Status is thought to be diffuse agricultural and septic tank pollution. Full implementation of the measures is expected to correct this, however recovery time will mean that probably no rivers will achieve Good Status before 2015.

2015	0%
2021	0%
2027	100%

The percentage status is determined by the number of reportable segments or subbasins. For this reason the percentage might not seem representative.

Alternative Objectives - Heavily Modified and Artificial Waterbodies

- ❑ Some surface waters have been substantially changed in character to allow uses such as:
 - Navigation
 - Water storage
 - Public supply
 - Flood defences
 - Land drainage.
- ❑ These waterbodies are called ***Heavily Modified***. This designation recognises that the waterbody cannot be returned to its natural condition and therefore sets an alternative objective of Good Ecological Potential.
- ❑ Some waterbodies are entirely ***Artificial*** for example canals and for the same reasoning are set the alternative objective of Good Ecological Potential.
- ❑ We must still achieve good chemical condition, prevention of deterioration and achieve our protected area objectives.

Heavily Modified and Artificial Waterbodies Status and Measures

Heavily Modified Water Bodies:

River Camac

- ❑ **Reason for designation:** Flood Defences
- ❑ **Status:** Less than Good
- ❑ **Measures:** Protect and enhance ecological value of marginal aquatic habitat, banks and riparian zone, Protect and restore historic aquatic habitats, Increase in-channel morphological diversity, e.g., install instream features, 2 stage channels

Leixlip Reservoir

- ❑ **Reason for designation:** Impoundment for drinking water supply
- ❑ **Status:** Less than Good
- ❑ **Measures:** Ecological potential study

Artificial water Body:

Grand Canal Main Line E of Lowton

- ❑ **Reason for designation:** Man-made canal
- ❑ **Status:** Good Ecological Potential
- ❑ **Measures:** None identified

AWB - Reservoirs	

What can you do?

You have your say!

- Now is your chance to have a say on the Programme of Measures:
 - Have all issues been addressed?
 - Do you have any measures to add to the proposed Programme of Measures?
 - What do you think about the Alternative Programme of Measures?
 - Would you spend more to achieve our goals faster?

- We can all help to implement this important legislation by thinking about our impact on the water environment in our everyday lives.

How to comment

Please *have your say* in any of the following ways:

1. Email your comments to comments@erbd.ie and include River Basin Management Plan Comments in the subject line

2. Write to:
